general equilibrium theory an introduction presents the mathematical economic theory of price determination and resource allocation from elementary to advanced levels suitable for advanced undergraduates and graduate students of economics this arrow debreu model known for two of its most prominent founders both nobel laureates is the basis of modern price theory and of a wide range of applications the new edition updates discussion throughout and expands the number and variety of exercises it offers a revised and extended treatment of core convergence including the case of non convex preferences and introduces the investigation of approximate equilibrium with u shaped curves and non convex preferences

this book takes on one of the great questions of the day why are some countries enormously rich and others so heartbreakingly poor henry j bruton organizes the discussion around three basic ideas the first is that well being reflects not only the availability and distribution of goods and services but also employment values institutions and quality of preferences the second is that ignorance is ubiquitous hence growth of well being depends primarily on commitments to searching and learning the extent of such commitments is embedded in deep seated characteristics of the society its history and the degree to which it can look ahead the third is that economic policy making is largely a matter of muddling through furthermore the idea that an economy can be assumed to be in a general equilibrium and can therefore be left to itself must be rejected the author explores these ideas and their implications for the processes of growth and for policies to facilitate that growth the book breaks new ground in its emphasis on ignorance and learning and its generalized definition of well being drawing from contemporary work in evolutionary economics the economics of technological change analytical economic history and the new political economy this work should be of interest to historians sociologists and students of technology as well as economists while directly concerned with development it has implications for labor trade economic history and industrial organization henry j bruton is professor of economics williams college

emphasis is placed on intuitively based mathematical models for chemical transport and transformations although developed for a one semester graduate course chemical fate and transport in the environment second edition is also an essential reference for environmental practitioners in industry consulting and government agencies book jacket

this textbook explains comprehensively and in rigorous detail not only mainstream microeconomics but also why many economists are dissatisfied with major aspects of it and the alternative that they are exploring in response the classical keynesian kaleckian approach this advanced yet user friendly book allows readers to grasp the standard theory of consumers firms imperfect competition general equilibrium uncertainty games and asymmetric information furthermore it examines the classical approaches to value and income distribution advocated by adam smith david ricardo and karl marx as well as post keynesian pricing theory and the microeconomics of variable capacity utilization using simple models it highlights the analytical roots of the important differences between the marginal neoclassical approach and the classical keynesian critically examining the plausibility and reciprocal consistency of their assumptions the book also addresses various microeconomic issues not generally included in advanced microeconomics textbooks including differential land rent joint production long period pricing capital theory from walras to the cambridge debates the foundations of aggregate production functions the microeconomics of labor markets and the long period theory of wages lastly it presents a unique re evaluation of welfare economics intended for advanced undergraduate and graduate microeconomics courses this textbook offers a comprehensive introduction to the various approaches and different schools of thought currently competing in the context of economic theory it can also be used in courses on value and distribution heterodox economics and the history of economic analysis in the present situation characterized by scientific uncertainty and the co existence of competing approaches it will stimulate students to form their own opinion as to which approach appears more promising from a scientific standpoint
